Letter of Recommendation

To whom it may concern,

I am writing this letter for Prasad Gahvane, who is a 2nd year student (Bachelor of Technology in Minerals and Metallurgical Engineering), Department of Fuel, Minerals and Metallurgical Engineering in Indian Institute of Technology (IIT) Dhanbad. I have known Prasad in my capacity of supervising his summer internship.

He was outstandingly impressive in his interview itself. I have interviewed several students and interns before, and I must say you seldom find someone as excellent as him. He was equally impressive and proactive during the internship as well. He was very prompt and always finished the work given to him in a very short time.

The project that he worked on involved analyzing datasets using Ridge regression and Principal Components (PCA) regression, in R. He was absolutely new to R and Ridge regression before the project, but he is a fast learner and quickly learned the concepts and got himself familiar with R in a short time. He developed incredible coding skills in R during the project. He is always keen to learn and implement new things, and never hesitant to take up daunting and challenging tasks. The internship was online, however, he managed to do well despite the hurdles of limited online interactions.

I would highly recommend Prasad for any future endeavours. He is extremely talented, hardworking and enthusiastic, and would be a positive addition to any project he will work on. If you require further information please feel free to contact me at sayantee@iimnagpur.ac.in. I wish him all the best, and I definitely know that he will do well in both academia and industry, and will come out with flying colours.

Sincerely,

Dr. Sayantee Jana,

(PhD. McMaster University, Post-doctorate University of Toronto),

Assistant Professor,

Decision Science and Information Systems Area,

Indian Institute of Management (IIM) Nagpur,

Nagpur, India
